

TABLE OF CONTENTS

PREFACES	v, vi
CHAPTER 1. PASCAL TRIANGLES AND THEIR PLANAR AND SPATIAL GENERALIZATIONS	1
1.1 The Pascal triangle and its properties	1
1.2 Binomial coefficients and their generalizations	9
1.3 Generalized Pascal triangles and generalized binomial coefficients	15
1.4 Lucas, Fibonacci, Catalan, and other arithmetic triangles	24
1.5 Pascal pyramids and trinomial coefficients	45
1.6 Multinomial coefficients and Pascal hyperpyramids	51
CHAPTER 2. DIVISIBILITY AND THE DISTRIBUTION MODULO p AND ITS POWERS, OF BINOMIAL, TRINOMIAL, AND MULTINOMIAL COEFFICIENTS	57
2.1 Divisibility of the binomial coefficients	57
2.2 The distribution modulo p and its powers of the binomial coefficients	69
2.3 Divisibility of the trinomial coefficients and their distribution modulo p and its powers	88

2.4	Divisibility of the multinomial coefficients by a prime p and its powers	94
2.5	Greatest common divisors and least common multiples of binomial coefficients. Factorization	101
CHAPTER 3. DIVISIBILITY AND THE DISTRIBUTION MODULO p OF GENERALIZED BINOMIAL COEFFICIENTS, FIBONACCI, LUCAS, AND OTHER SEQUENCES		105
3.1	Divisibility and the distribution modulo p of generalized binomial coefficients	105
3.2	Divisibility and the distribution modulo p of Fibonacci, Lucas, and Catalan numbers	118
3.3	Distribution modulo p of some numerical sequences	124
CHAPTER 4. FRACTAL PASCAL AND OTHER ARITHMETIC TRIANGLES		126
4.1	Fractals and their dimensions	126
4.2	Fractal Pascal triangles modulo p	130
4.3	Fractal generalized Pascal and other arithmetic triangles modulo p	133
4.4	Geometric arrangements of binomial coefficients whose products are perfect powers	135
CHAPTER 5. GENERALIZED ARITHMETIC GRAPHS AND THEIR PROPERTIES		140
5.1	Generalized arithmetic graphs	140

5.2	Special case of the generalized m-arithmetic graph	147
5.3	An asymptotic formula for the number of paths in the generalized m-arithmetic graph	151
5.4	Spatial isomorphisms and the generalized m-arithmetic graph	153
5.5	Properties of the cross-sections of the spatial arithmetic graph	158
CHAPTER 6. MATRICES AND DETERMINANTS OF BINOMIAL AND GENERALIZED BINOMIAL COEFFICIENTS AND OTHER NUMBERS		
6.1	Matrices and determinants of elements of the Pascal triangle	161
6.2	Matrices and determinants of elements of the generalized Pascal triangle	166
6.3	Matrices and determinants of elements of other arithmetic triangles	168
CHAPTER 7. COMBINATORIAL ALGORITHMS FOR THE CONSTRUCTION OF GENERALIZED-HOMOGENEOUS POLYNOMIALS. SOME CLASSES OF NONORTHOGONAL POLYNOMIALS		
7.1	Generalized-homogeneous polynomials. Euler's formula	170
7.2	Factorial polynomials. Algorithms for the construction of the "exponent matrix"	176

7.3	Combinatorial algorithms for the construction of basis systems of polynomial solutions of partial differential equations	182
7.4	Polynomials of binomial type and related polynomials	198
7.5	Other classes of nonorthogonal polynomials	207
